

# Project Accomplishments

The following milestones were successfully completed during the project:

- Loaded and validated the CTU-IoT dataset
- Cleaned and standardized raw network traffic data
- Performed a 70/30 train-test split
- Conducted EDA exclusively on training data
- Engineered features to improve data representation
- Encoded categorical variables for model compatibility
- Applied feature scaling using StandardScaler
- Generated visualizations to reveal data patterns
- Built a complete preprocessing pipeline for machine learning
